# **Multi-Directional HF Sensor**

# HMW27/AA DALI Output & Tri-level Dimming

### **Product Description**

HMW27/AA is a HF standalone motion sensor, with one DALI channel output (80mA DALI power supply built-in). It is designed with a metal surface mount box and the detection angle is adjustable by needs. HMW27/AA is ideal for typical indoor applications such as offices, classrooms, healthcare, and other commercial areas (corridors and warehouses).

### Features

- Tri-level dimming control based upon occupancy (also known as corridor function).
- Intelligent photocell lights and sensors only operate when needed, natural light has proirity.
- DALI bus power supply

l guaranteed:64mA l max:80mA U rated:15VDC

- Support to control DT6 LED drivers
- 1 Push inputs for flexible manual control
- Black & White & Gray metal surface mount box options
- 🗶 User-friendly design for installation
- 5 year warranty

### **Technical Specifications**

Input & Output Characteristics		
Operating voltage	220~240VAC 50/60Hz	
Stand-by power	<1W	

Sensor Data	
Sensor Principle	High Frequency (microwave)
Ceiling-mounted Detection Range	Installation Height : 3m Max. Detection Range :13m *Sensor head angle set to 70°
Wall-mounted Detection Range	Installation Height : 2.5m Max. Detection Range: 22m
Detection angle	360°

 $^{*}$  For more details of detection range, please refer to "detection pattern" section.

DALI Bus Power Supply		
Iguaranteed	64mA	
lmax	80mA	
Urated	15VDC	

Environment			
Operation temperature	Ta: -15°C ~ +45°C		
Storagetemperature	-40°C~+70°C		
Relative humidity	20~90%		
IP rating	IP20		
Safety & EMC			
EMC standard (EMC)	EN55015, EN61000-3-2/-3-3, EN61547		
Safety standard (LVD)	EN60669-1, EN60669-2-1		
RED	EN300328, EN301489-1/-17, EN50663		
Certification	CE, UKCA, RED, RCM		
Certification	CE, UKCA, RED, RCM

# **Functions and Features**

### 1. Tri-level Control

Hytronik builds this function inside the motion sensor to achieve tri-level control, for some areas which require a light change notice before switch-off. The sensor offers 3 levels of light:  $100\% \rightarrow dimmed light (natural light is insufficient) \rightarrow off; and 2 periods of selectable waiting time: motion hold-time and stand-by period; Selectable daylight threshold and freedom of detection area.$ 

With sufficient natural light,

the light does not switch on

when presence is detected.

With insufficient natural light, the sensor switches on the

light automatically when

presence is detected.

After hold-time, the light dims to stand-by level if the surrounding natural light is below the daylight threshold.

Light switches off automatically after the stand-by period elapses.

#### 2.24h Daylight Monitoring Function

Our innovative and patented software enables our antenna with built-in daylight sensor to provide a "smart photocell" function. This function is activated when stand-by period is set to " $+\infty$ ".

The light switches on at 100% when there is movement detected.

The light dims to stand-by level after the hold-time.

The light turns off completely when natural light lux exceeds daylight threshold pre-set.

The light remains in dimming level at night.

The light automatically turns on at 10% when natural light is insufficient (no motion).

Settings on this demonstration: Hold-time: 10min Daylight threshold: 50lux Stand-by dimming level: 10% Stand-by period: +∞

#### 3. Robust HF Sensors Design --- Anti-interference Technology

Hytronik's microwave motion sensor uses 5.8GHz high frequency (HF) antenna in the product design. With the increasing density of wireless environments such as 5G GSM tower and 5G Wi-Fi coverage, this has created extra challenges for sensor's operation because the air is shared by all kinds of wireless signals, and transmissions from any device at the similar frequency could potentially cause interference. The effects of interference which can be noticed by users are usually false triggering of sensors (turning on/off erratically), or lights staying on even after hold time etc.

To get around such tough environment, Hytronik has developed a new series of robust HF modules, designed to be loaded with our own special sophiscated software algorithms. These robust HF modules can withstand differ-

### Settings (Remote Control HRC-05)

# Permanent ON/OFF function

Press the "ON/OFF" button, the light goes to permanent on or permanent off mode, and the sensor is disabled.

\* Press "Auto Mode", "RESET" or "Scene mode" buttons to quit this mode. The mode will change to AUTO Mode after power failure.

Auto Mode

#### Sensor mode

Press "Auto Mode" button, the sensor starts to function and all settings remain the same as the latest status before the light is switched on/off.

**Reset function** 

Press "RESET" button, all settings go back to default settings.

Long press "Dim +" or "Dim " to adjust the target lux level during hold-time. " + " means increasing the target, " " means decreasing the target.

HRC-05 Note: the light will flash ONCE rapidly after receiving the command from the remote control successfully.

#### Test mode

This button is for testing purpose only. The sensor goes to test mode (hold-time is 2s) after commissioning, meanwhile the stand-by period and daylight sensor are disabled.

\* This mode can be ended by pressing "reset", or any button of "scene mode" and "hold-time". The sensor settings are changed accordingly.

### Power output

By pressing these two buttons, the output shifts between 80% (at initial 10,000 hours) and 100%, for energy saving purpose.

Lux disable

Press this button, the built-in daylight sensor stops working, and all motion detected could turn on the lighting fixture, no matter how bright the natural light is.

#### Scene mode

There are 4 scene modes fixed program built in the remote control to choose for different applications:

Scene options	Detection range	Hold-time	Stand-by period	Stand-by dimming level	Daylight sensor
SC1	100%	1min	10min	10%	2Lux
SC2	100%	5min	10min	10%	2Lux
SC3	100%	10min	30min	10%	10Lux
SC4	100%	10min	$+\infty$	10%	50Lux

\* End-user can adjust the settings by pressing buttons of detection range/hold-time/stand-by period/stand-by dimming level/daylight sensor. The last setting stays in validity.

#### Detection range

Press the buttons of "detection range" to set detection range at 10% /50% /100%.

#### Hold-time

Press the buttons of "hold-time" to set hold-time at 2s / 30s / 1min / 5min / 10min.

#### Daylight sensor

Press the buttons of "daylight sensor" to set daylight threshold at 2Lux / 10Lux / 50Lux. The fixture will not turn on if ambient natural light lux level exceeds the threshold preset when motion detected.

#### Stand-by period (corridor function)

Press the buttons of "stand-by period" to set stand-by period at 0s / 10s / 1min / 10min / 30min /  $+\infty$ . \* "0s" means on/off control; " $+\infty$ " means bi-level dimming control, and the fixture never switches off.

#### Stand-by dimming level

Press the buttons of "stand-by dimming level" to set the stand-by dimming level at 10% / 20% / 30%.

# **Dimming Interface Operation Notes**

### Switch-Dim

The provided Switch-Dim interface allows for a simple dimming method using commercially available non-latching (momentary) wall switches.

Switch Function	Action	Descriptions	
	Short press (<1 second) * Short press has to be longer than 0.1s, or it will be invalid.	- Turn on/off - Recall a scene - Turn on only - Quit manual mode - Turn off only - Do nothing	
Push switch	Double push	- Turn on only - Quit manual mode - Turn off only - Do nothing - Recall a scene	
	Long press (≥1 second)	- Dimming - Colour tuning - Do nothing
